Welded Cases With Optional Side & Back Panels

Designed For The Way You Work, For 20% Less.

X-File storage solutions combine the best of 4-post shelving and fully welded cabinets to give you fully assembled solutions at a low price. X-File provides the storage that suits you best at up to 20% savings when compared to traditional lateral cabinets.

Optional end panels and backs are available for exposed sides. Units are configured similar to starter/adder systems where you add panels only where needed.

All X-File units come fully welded and ready to install.

Don't pay for what you don't need!

The principle is simple; typical cabinets are placed along a wall, back to back and/or side to side. In this arrangement, the sides and backs are not visible. X-Files allows you to add backs and sides only where they are visible.

The units are strong and rigid even when the side and back panels are left off, as you would expect from Russ Bassett.

What you need...Nothing more

Nothing Less.

All units are available in 15" letter or 18" legal depth configurations
